Communication Management Plan

KaPamana

An interactive heritage and learning adventure about Oriental Mindoro

Document information	Details
Prepared for	KaPamana project team and academic project adviser / instructor
Prepared by	KaPamana Project Team
Document version / status	Version 1.0 • Prepared for academic submission; proposed project communication baseline
Preparation date	October 21, 2026
Submission deadline	October 23, 2026, 11:59 PM (Asia/Taipei, UTC+8)
Coverage	Calapan City and all 14 municipalities of Oriental Mindoro
Plan owner	Project Manager / Team Leader

1. Purpose and project context

This plan defines what the KaPamana team communicates, to whom, through which channels, how often, and with whose approval. It supports coordinated development, responsible heritage content, clear player guidance, reliable releases, and timely academic reporting.

KaPamana combines community runner missions, local-history discoveries, fictional municipal sprites, meaningful collectibles, passport stamps, Buddy abilities, and optional learning practice. Its interface follows a sky-blue, cream, and yellow illustrated style. Community adventures focus on history, everyday life, identity, livelihoods, and heritage; festivals and tourist-attraction adventures are handled separately.

2. Communication objectives

Keep scope, responsibilities, deadlines, and dependencies visible; provide traceable decisions; communicate research uncertainty honestly; obtain informed feedback from community reviewers and players; prevent release confusion; and ensure that questions, defects, and cultural concerns receive timely ownership and resolution.

3. Assumptions and boundaries

Personnel names, adviser contacts, community partnerships, meeting availability, and external approvals have not been supplied. Responsibilities are therefore assigned by role. One person may hold several roles, but an author should not be the sole approver of a significant historical claim or release. Proposed channels and response targets take effect when the team adopts this plan. External participation is voluntary; review requests do not imply endorsement.

Stakeholders and accountability

4. Stakeholder communication needs

Stakeholder	Information needed	Owner / approach
Adviser / instructor	Milestones, scope changes, evidence of progress, academic deliverables, unresolved risks.	Project Manager; concise weekly report and milestone review.
Project team	Priorities, assignments, interfaces, source changes, defects, blockers, decisions.	Project Manager and workstream leads; shared board and team coordination.
Developers and QA testers	Acceptance criteria, build identifiers, save compatibility, reproduction steps, test results.	Development Lead; repository, pull requests, test logs, release checklist.
Research and content team	Place coverage, claim-level sources, conflicting accounts, approved player copy.	Research Lead; source register and content review queue.
LGUs, historians and cultural reviewers	Specific claims, supporting documents, intended representation, attribution and correction requests.	Research Lead; targeted review packet through an agreed contact.
Indigenous representatives / knowledge holders	Purpose, intended audience, cultural boundaries, permissions and portrayal.	Research Lead; respectful consultation with appropriate community representatives.
Players, parents / guardians, educators	Instructions, accessibility, feedback options, privacy and understandable learning goals.	UX / Testing Lead; plain-language invitations and guided feedback.
Release users / demonstration audience	Version, changes, install steps, known issues, backup guidance and support route.	Release Lead; approved release notes and build link.

5. Roles and decision rights

Project Manager: maintains this plan, meeting cadence, issue ownership, decision log, schedule, and adviser communication. **Development Lead:** owns architecture, implementation status, technical reviews, save compatibility, and build readiness. **Research Lead:** owns source quality, factual wording, uncertainty labels, and community review coordination.

UX / Testing Lead: organizes accessible feedback and test sessions; records usability and gameplay issues. **Release Lead:** packages approved builds, verifies version and commit, publishes release instructions, and coordinates rollback. **Documentation Lead:** manages minutes, document versions, the submission package, and evidence links. The adviser approves academic scope or submission requirements when required; community reviewers advise on their relevant knowledge, without being represented as endorsing the entire app.

Communication matrix and schedule

6. Routine communication matrix

Communication / audience	Cadence and channel	Required content	Sender → recipient
Team progress update	Each active workday; agreed team chat.	Completed work, next task, blocker, owner and link.	Each member → project team
Coordination meeting	Weekly; 30–45 minutes, online or in person.	Priorities, dependencies, risks, actions and dates.	Project Manager → project team
Repository / board update	Whenever work changes state; GitHub Issues / project board.	Status, acceptance criteria, assignee, evidence and dependencies.	Task owner → team / reviewers
Technical and QA review	Per pull request and before release; repository and test report.	Changes, tests, save impact, device coverage, known defects.	Development Lead / QA → Release Lead
Research / cultural review	Before relevant content is approved; source register and targeted email or review meeting.	Claim IDs, sources, exact proposed wording, uncertainty and permissions.	Research Lead → relevant reviewers
Adviser status report	Weekly and at milestones; agreed email / course platform.	Progress, planned work, risks, decisions needed and evidence.	Project Manager → adviser
Player feedback / playtest	At agreed playable milestones; supervised session or feedback form.	Build version, tasks, consent, observations and issue summary.	UX Lead ↔ invited participants
Release notice	Each approved distribution; GitHub release / Actions link and agreed notice channel.	Version, commit, changes, installation, backup, known issues.	Release Lead → users / team
Incident or urgent correction	Immediately after triage; direct contact plus issue record.	Impact, affected build / claim, containment, owner, next update.	Discoverer → responsible lead / Project Manager

7. Response expectations and meeting discipline

During agreed project hours, routine internal questions should be acknowledged within one working day and blocking items within four working hours. Acknowledgment identifies the owner and next update; it is not a promise of immediate resolution. External reviewers receive a proposed response date and one respectful follow-up after five working days. No reply is not approval.

Send meeting agendas at least 24 hours ahead where practical. Record decisions, dissent, assigned actions, and deadlines. Publish minutes within one working day and invite corrections within two working days. Cancel a meeting when an asynchronous update meets the same need.

Channels, records and approvals

8. Official communication channels

GitHub: authoritative code, work items, pull requests, build references, defects, and technical decisions. **Shared document folder:** controlled plans, research packets, meeting minutes, signed forms where applicable, and academic deliverables. **Agreed team chat:** rapid coordination; significant decisions must be copied to the relevant issue or decision log. **Email / course platform:** formal adviser correspondence, authorized external review, and final submission. **Video / in-person meetings:** discussion and demonstrations supported by written minutes.

The team confirms exact channel names, administrators, backup contacts, and access permissions at adoption. Do not rely on private chat history as the only project record. Use a single shared link for each controlled document and restrict editing to assigned owners.

9. Information flow and approval gates

Item	Required flow and approval
Task / feature	Owner records objective and acceptance criteria → lead checks dependencies → implementer links changes → reviewer / QA records outcome → lead marks complete.
Historical / cultural content	Researcher logs claim and source → Research Lead checks evidence and uncertainty → appropriate reviewer is consulted when needed → approved wording and attribution are recorded before publication.
Scope / deadline change	Requester records impact on schedule, workload, content and player experience → leads assess options → Project Manager records decision; seek adviser approval when academic requirements are affected.
Android / web release	Development Lead supplies tested commit → QA records checks → Release Lead confirms package version, artifact and known issues → Project Manager approves distribution and communication.
Academic submission	Documentation Lead assembles current PDF and evidence → team checks completeness → Project Manager or designated submitter uploads → receipt and final submitted version are retained.

10. Recordkeeping and document control

Use filenames such as **KaPamana_Communication_Management_Plan_v1.0_2026-10-21.pdf**. Log version, date, author role, summary of change, and approver. Use draft versions v0.x, the approved baseline v1.0, minor updates v1.1, and substantial revisions v2.0. Preserve superseded versions as read-only records.

Maintain five linked registers: stakeholder/contact register; communication and meeting log; decision/change log; issue/risk log; and claim/source register. Each record includes an ID, owner, status, relevant date, next action, and evidence link. Store raw participant details separately from general team reports. Retain academic records according to institutional requirements; set a documented deletion date for personal research or testing data.

Content integrity and player communication

11. Historical and cultural communication rules

Cover all 15 localities with a visible coverage checklist. Describe name origins, settlement, administration, historical events, livelihoods, culture, values, skills, and identity only as far as the evidence supports. Do not call an inhabited place “discovered” by outsiders; identify a documented arrival or first surviving written record instead. If no reliable founder, etymology, or earliest-settlement account is established, state the gap.

Every publishable claim must link to a claim ID and source record containing publisher, title, URL, date when available, page / section, access date, evidence type, and editorial notes. Distinguish primary documents, scholarly interpretation, official summaries, oral accounts, and legends. Cross-check important dates and etymologies. Label disagreements and unverified accounts; never turn an unverified claim into an unqualified quiz answer.

Consult appropriate Indigenous representatives for sensitive knowledge or portrayal. Identify specific communities where supported, rather than treating Mangyan peoples as interchangeable. Record permission, attribution, use limits, and requested corrections. Exclude sacred, restricted, or unlicensed material. Fictional sprites must not be presented as real historical figures or community spokespersons.

12. Player-facing communication standards

Before each mission, show the objective, required keepsakes, time or damage constraints, controls, and completion conditions. During play, make progress readable and explain feedback without obscuring movement. After play, distinguish success, incomplete objectives, practice, mastery, earned stars, coin rewards, and stamp requirements. Do not imply that failed or skipped required tasks earn completion.

Explain achievement rewards and one-time claims clearly. Keep captions concise and offer optional deeper reading and sources. Preserve untimed practice where available. Use readable contrast, touch-friendly controls, keyboard alternatives, plain language, and reduced-motion support. Do not claim educational effectiveness or age suitability solely from automated tests.

13. Feedback, privacy and consent

Feedback forms should ask for the app version, task or municipality, issue description, expected / actual result, and optional screenshot. Avoid collecting names, precise locations, school details, or device identifiers unless required and explicitly explained. Never request passwords or raw private backups in public issues. Redact sensitive information from logs and screenshots.

For testing with minors, obtain parent / guardian permission and age-appropriate participant assent under applicable school rules. Explain the purpose, voluntary participation, recording choices, and how to stop. Record a session only with permission. Summarize findings without identifying participants; restrict raw recordings and delete them according to the agreed retention schedule.

Escalation, risks and monitoring

14. Escalation and incident communication

Priority	Examples / owner	Response and next step
Critical	Save loss, serious privacy exposure, harmful cultural material. Project Manager + relevant lead.	Notify directly as soon as identified; pause affected distribution or content. During agreed coverage, acknowledge within 1 hour and issue an initial impact / containment update within 4 hours. Escalate to adviser / relevant authority when necessary.
High	Progression blocked, wrong reward unlock, major historical error, failed release. Relevant lead.	Acknowledge within 4 working hours; assign owner and workaround / correction plan within 1 working day. Escalate to Project Manager if blocked or overdue.
Normal	Non-blocking usability, minor wording, visual issues, improvement suggestions. Task owner.	Acknowledge within 1 working day; triage at the next weekly review and communicate disposition.

If the assigned lead is unavailable, contact the Project Manager or designated deputy. Outside agreed coverage, urgent reports remain visible and are addressed at the next available response window; this student project does not promise 24/7 support. Do not post security details or personal data publicly.

An incident update states: incident ID, affected build / content, known impact, confirmed facts, containment, owner, next update time, and user action. Preserve evidence. After resolution, verify the correction, notify affected stakeholders, and record prevention actions. Roll back or withdraw a faulty artifact where feasible; do not instruct users to uninstall before discussing backup and save risks.

15. Communication risks and controls

Risk	Preventive / corrective control
Decisions lost in chat	Copy decisions and rationale into the decision log; link assigned actions.
Conflicting historical accounts or delayed review	Track uncertainty; use qualified wording or hold the claim. Never treat silence as sign-off.
Old APK mistaken for current app	Communicate version, commit, build date and a single approved artifact link; verify Settings version.
Too many messages / unclear ownership	Use one task owner, concise summaries, priority labels and a scheduled digest.
Connectivity or member absence	Keep accessible asynchronous records and nominate a deputy for each essential role.
Feedback harms privacy or misrepresents a community	Minimize and restrict data; use consent, attribution checks and a correction channel.

16. Performance measures and review

Review weekly: 100% of active tasks have an owner and next action; 100% of releases identify version and commit; 100% of published factual claims have source IDs and review status; at least 90% of internal messages meet acknowledgment targets; minutes are posted within one working day; overdue decisions and unresolved critical issues are explicitly reported. These are proposed targets, not measured results. The Project Manager revises this plan when a missed target, new stakeholder, incident, or project change reveals a communication gap.

Submission schedule and working templates

17. Schedule to the academic deadline

Date (UTC+8)	Planned activity	Responsible role / evidence
October 21, 2026	Prepare plan; confirm scope, role coverage, channels and review availability.	Project Manager / Documentation Lead; draft and reviewer list.
October 22, 2026	Team review for completeness; check responsibilities, cultural review, privacy, release and escalation procedures.	Workstream leads; comments and revision log.
October 23, 2026, by 8:00 PM	Suggested internal cutoff: finalize PDF, verify readability, filename and assignment requirements.	Documentation Lead; final review checklist.
October 23, 2026, by 10:30 PM	Suggested submission target: upload final file and verify receipt. Keep a buffer for upload issues.	Designated submitter; submission confirmation.
October 23, 2026, 11:59 PM	Official assignment deadline. Multiple submissions are allowed; replace only with a verified newer version.	Designated submitter; latest accepted receipt and final file.

18. Reusable communication templates

Weekly status report: Reporting period; overall status (on track / at risk / blocked); completed deliverables with links; next priorities; research coverage and uncertainties; testing / release status; risks and blockers; decisions needed with owner and due date.

Meeting minutes / decision: Meeting ID and date; attendees by role; agenda; decision and rationale; alternatives or concerns; action items with owner and deadline; supporting links; recorder and review status.

Issue / change request: ID; reporter role; build / claim / municipality; description; expected and actual behavior; impact and priority; evidence; proposed resolution; schedule / save / cultural implications; owner; approver; verification and closure date.

Release notice: App version; commit; build / artifact link; release date; changes; supported install / update path; save compatibility and backup advice; test summary; known issues; support / correction route.

19. Approval and adoption record

The names and dates below are completed by the project team during adoption. This document does not represent a signed adviser approval or community endorsement.

Role	Name / signature	Date
